**Day  
9****Weekly Question****Why does metal rust?**

Metal is used to build many types of structures, appliances, and other everyday items because it is strong, easy to shape, and relatively cheap and plentiful. But most metals react with water and oxygen, which is present in almost every environment on Earth. So how do people use metal and keep it from rusting?

One way to keep metal from rusting is to paint it. Paint forms a protective barrier between metal and the oxygen and moisture in the air. Another way to keep metal from oxidizing is to add a substance to it that makes the metal less able to give away its electrons. For example, stainless steel is made from iron that has carbon and chromium added to it. Stainless steel doesn't oxidize or corrode as quickly as ordinary iron. That is why knives are often made of stainless steel. Their blades stay sharp longer.

The Golden Gate Bridge in San Francisco is actually painted orange, not gold.
